CROP ESTIMATES FOR 2016-2017 SEASON

After the county wide crop estimation exercise, the following report indicates that the crop will drop in high altitude areas due to low flowering –occasioned by **el nino** phenomenon but will increase slightly in lower agro-ecological zones although incidences of increased leaf rust is noted.

Notably, there will be increase in the west of rift zones due to new plantings.

However, the figures may be adjusted as and when necessary. It is estimated that production may drop by 6-10 % from the estimated 50,000 MT
